

## MTHS24 – Exercise sheet 11

Morning: Christian Fischer

Afternoon:

Friday, 26 July 2024

### Lecture material

#### Discussed topics:

- Functional methods
- Dynamical Chiral Symmetry Breaking
- Spectra of conventional and exotic hadrons
- (optional:  $g-2$ , form factors,...)

#### References:

- Eichmann et al., “Baryons as relativistic three-quark bound states,” PNP **91** (2016), 1-100 [arXiv:1606.09602 \[hep-ph\]](https://arxiv.org/abs/1606.09602).

### Exercises

#### 11.1 Diquarks

Write down spin, color and flavour wave functions for a scalar and an axialvector diquark built from

- (a) two light quarks (what is the resulting isospin ?)
- (b) two strange, charm or bottom quarks
- (c) a heavy-(not-so-heavy) combination such as  $bc$ ,  $bs$  or  $cs$ .

*Hint: carefully think about symmetries...*

#### 11.2 Four-quark states

Now think about a four-quark state with two heavy quarks and two light anti-quarks in the two flavour combinations  $b\bar{b}q\bar{q}$  and  $b\bar{c}q\bar{q}$ . Suppose, the quarks and antiquarks are arranged in scalar (S) and axialvector (A) diquarks. Which diquark combinations are possible for the following quantum numbers?

- (a)  $I(J) = 0(1)$
- (b)  $I(J) = 1(1)$
- (c)  $I(J) = 0(0)$

*Hint: again carefully think about symmetries...*
